A smile says it all. It's what Xhibit helps you see in your patients and their families.
It's the confidence and security they enjoy when you can't be at the bedside; knowing you're always watching over them.

**Xhibit**™
The Art of Monitoring

Xhibit™

NOT JUST A PRETTY INTERFACE...

EFFICIENCY BY DESIGN

Fully customizable displays allow you to:

- Organize information based on patient's condition
- Identify patients by caregiver
- Expand patient information easily to full screen
- Identify alarm severity through color, flash and tones
- Use only one or two menu steps for any function

FLEXIBILITY WITH A PURPOSE

Xhibit is a scalable system providing you freedom to monitor up to 48 patients.

Use one screen or up to four high-resolution displays for detailed views of a single patient, full disclosure (via Spacelabs' Intesys Clinical Suite), clinical information systems, PACS, and more.

Easily adjust which patients are viewed on each screen and the acuity of their data.

'One touch' or 'one click' quickly shows all bedside functions for a particular patient.

TOOLS THAT WORK FOR YOU

- Virtual sticky notes. No more paper notes everywhere; simply create on screen
- Installs onto your network in less than 30 minutes
- Intuitive menus ensure workflow and user interactions are minimized
- A high level of cyber-security and reliability employed

TECHNOLOGY THAT WORKS FOR YOU
