Small Monitor. Big Heart.

We know a hospital stay is stressful for both patients and their families. We understand how important it is to provide the best possible experience along with the highest level of care. That's why we developed the élançe monitor.

Slim and lightweight, this patient-side monitor has been meticulously engineered to meet the needs of caregivers and their patients. Its intuitive design provides the highest level of performance and reliability, supporting the best of care.

REFINED RELIABILITY

élançe provides high-performance patient monitoring with essential parameters throughout the care continuum. Advanced design features, such as its fanless technology, enhance reliability.

More than a bedside monitor, élançe is a patient-side monitor. Lightweight, its built in handle and simple, quick-release mounting options make it highly mobile.

ROBUST PERFORMANCE

élançe offers a robust feature set to provide the best possible patient care. All essential parameters such as ECG, Respiration, NIBP, SpO₂, and Temp are monitored with precision, and are clearly displayed on the ultra-bright LCD widescreen.

Whether you choose a 10.2" or 12.1" wide flat screen, 5 or 6 waveforms, the sophisticated system architecture and algorithms ensure the highest levels of performance and reliability.

EXCEPTIONAL USER EXPERIENCE

The élançe monitor has an ultra-bright and vivid widescreen display, a touch screen user interface and a simple, single-level menu structure. All of this makes it easier and more intuitive to use. Its contemporary slim design is available in either natural white or elite black.

Microsoft® Windows® CE technology makes it easy to network élançe monitors directly to a Windows based central station, bringing together information for up to 32 patients seamlessly.

PERFORMANCE WITH STYLE
